***Body and Earth: In-Depth Training***

In this immersive residential workshop, we draw from ten Body and Earth themes that we have investigated and articulated over the last three decades as movement artists, educators, and authors. Modeling collaborative teaching, we both differentiate themes and approaches, and appreciate the overlapping interconnectedness of topics that circulate between science and embodied experience, stimulating creative imagination, artistic forming, and self-care. Our intention is that these practices are profound resources for daily life as well as well as for facilitating others in embodied learning.
